WESLEYAN MISSION.

[ESTABLISHED 1814.]

According to the plans adopted for conducting this Mission, the Island is divided into two Districts; the first is called SOUTH CEYLON, and includes those stations where *Singhalese* is the vernacular language of the Natives; the second is called NORTH CEYLON, and comprehends the principal stations where Tamul is the prevailing Native language.—These stations &c. are as follows :—

SOUTH CEYLON.

On most of the above stations there are substantial and commodious Chapels in which divine worship is regularly conducted in the English, Portuguese, Singhalese or Tamul languages, in addition to which almost every one of the 95 Schools is used as a place of worship on the Sabbath days for the benefit of the Native congregations. Besides the regular Missionaries the Mission employs about 20 Burgher and Native Catechists who in addition to their daily employment in the Schools, conduct the religious services which are held in at least two or three different Schools on the Sundays.

At each of the principal stations there is an English School under the immediate Superintendence of the Missionaries. The best teachers that can be procured in the country are employed; and to several of these schools books, writing paper, &c. are furnished gratuitously. The number of scholars regularly educated in the English language is about 783. All the native schools are furnished with Books, &c. of every kind without any payment. This item of expenditure would be very great had the Mission not the advantage of a Printing establishment. The amount expended in the school establishment of the Wesleyan Mission in Ceylon is about £1300 per annum.

The Wesleyan Press has been chiefly occupied, as in former years, in printing for the Colombo Auxiliary Bible Society, The Colombo Religious Tract Society, and School and other books for the Mission. But besides these, it has been of late a good deal employed in printing Prayer Books, Religious Manuals, and Controversial Tracts for the Roman Catholics.

The general affairs of the Mission are managed by two Annual District Meetings:—the one of which, that for “*South Ceylon*” assembles in Colombo; and that for “*North Ceylon*,” in Jaffna.

Chairman———B. CLOUGH.

Secretary for the South—JOHN McKENNY*

Do. . . North———J. C. GEORGE.

* Mr. McKENNY is at present on leave of absence in England.

BAPTIST MISSION.

[ESTABLISHED 1812.]

THREE Chapels belonging to this Mission in Colombo, are regularly supplied with preaching in the English, Portuguese, and Singalese languages. There is likewise another Station at Hangwella where divine service is regularly conducted. Besides these stated places, In many of their School-rooms, and in other houses both in Colombo—and the villages contiguous to Colombo and Hangwella, the word of God is regularly preached.

Preachers Rev. E. DANIEL.—Rev. H. SIERS.—DON CAROLIS ALVIS—and several native assistants.

In and around Colombo are 13 day schools containing near 600 children—of whom about 120 are females. Two Sabbath schools are regularly attended—One in the Pettah—the other at the Grand Pass.

- Calendar in Corpus Christi Library, Cambridge, for 1880, contains an account of them. Calendar for 1386 in *English*, contains them throughout. (This almanach is very splendid, and is full of the astrological, astronomical, and medical knowledge and prejudices of the period.)

- taught, and an eclipse predicted by Thales of Miletus, about — A.C. 640
- That the planets are unconnected with the earth; that they are the habitations of animated beings; that the fixed stars are the centres of other systems; and that the earth moves round the centre of the system of the world, maintained by Anaximander (the earliest philosophic astronomer on record), who is also said to have been the inventor of maps and charts. He was born about — A.C. 610
- That the earth is a plane, and that the heavens are a firmament (—), or solid substance, like the earth, maintained by Anaximenes, who is said to be the inventor of sun-dials (though probably only the introducer of them into Greece.) He was born about — A.C. 554
- That the ethereal, or upper regions of the atmosphere, were fire; that the fire drew up from the earth, and ignited, masses of stone, which thus became stars; that the comets were wandering stars; that the light of small stars occasioned the white colour of the milky way, and that the moon is irregular in its surface, and habitable like the earth, maintained by Anaxagoras—a meteoric stone that fell in Thrace, probably misled him as to the ethereal regions and the stars. His conjectures with regard to the milky way and the moon have been confirmed, as far as observations have been carried. The same philosopher was the first who wrote on the phases of the moon and eclipses. He was banished from Athens, on a charge of insulting and contemning the gods, by teaching natural philosophy. He was born about — A.C. 500
- Pythagoras, the disciple of Thales, travelled, like his master, into the east, and, like him, corrected the errors into which his countrymen had fallen. He demonstrated, from the varying altitudes of the stars by change of place, that the earth must be round; that there might be antipodes on the opposite part of the globe; that Venus was the morning and evening star; that the universe consisted of twelve spheres—the sphere of the earth, the sphere of the water, the sphere of the air, the sphere of fire, the spheres of the moon, the sun, Venus, Mercury, Mars, Jupiter, and Saturn, and the sphere of the stars. He admitted the idea of a plurality of worlds, and even calculated the height of the people in the moon; and he maintained that the motions of the twelve spheres must produce delightful sounds inaudible to mortal ears, which he called “the music of the spheres.” He was perse-

- cuted and is said to have perished with hunger, at the age of eighty. about — A.C. 506

- Metonic cycle of 19 years 7 months. as the period of coincidence in the motions of the sun and moon, introduced 16th July — A.C. 433
- The lunar month estimated at 29 d. 12 h. 48' 38'', and the year at 365½ days, by Eudoxus, who died about — A.C. 368
- [The same philosopher attempted to explain the planetary motions, by a very complicated assemblage of concentric spheres.]
- An occultation of Mars by the moon; and one of a star by Jupiter, observed by Aristotle, about A.C. 350
- About the same time Pytheas of Marseilles is said to have travelled to Iceland; and seen the sun in the north; he determined the obliquity of the ecliptic at 23° 50', and is said to have been the first that observed the dependence of the tides upon the moon.
- [This may be considered as the termination of the first epoch in the history of astronomy; and though some of the conjectures made during it were sagacious enough, there were no great connecting principles. They had no idea of the distances of the heavenly bodies; or the means of ascertaining them; and they had no other notion of the stability of the system, but that of its being upheld by solid spheres. Only one attempt was made to account for the stability of the earth; that by Pasmenides, who argued upon what is called the *sufficient reason*: that it had no reason to fall in one way rather than another, could not fall all ways at once, and therefore stood. In the next epoch, that during which the school of Alexandria flourished, the first of these desiderata was supplied, and practical astronomy became a science; but it was reserved for modern times to supply the latter, and perfect the theory of this most sublime and beautiful branch of human knowledge.]
- The positions of the stars with regard to the equator, and the equinoxes determined by Aristillus and Timarchus, about — A.C. 300

- By this settlement, which produced such an important change in that large portion of India, the Zemindars, who were, in fact, the revenue agents of the Mogul government, usually hereditary and possessed of much power and influence, but not owners of the land, which they could neither sell nor alienate, were declared the actual landowners, and from them the principal revenue of India was to be derived, in the shape of land-tax. The Ryots, or peasantry, who, though often grievously oppressed, were, after the Sovereign, the real owners of the soil, of which they could not be dispossessed, while they paid the assessments levied upon it, were declared the tenants of the Zemindars. The effects of this financial measure were disastrous. The Zemindars, obliged to go through the legal formalities to collect their rents from the Ryots, were unable to pay their taxes to the Government, whose proceedings were summary. Their lands were gradually sold for arrears of taxes, and passed into the hands of absentee landlords; in a few years almost all the Zemindars disappeared. No improvement took place among the Ryots, who were perhaps more oppressed by the middlemen immediately above them, than they had been by the Zemindars.
